SUMMARY

Senior PHP/Laravel Developer with 3.5+ years of professional experience building scalable web applications, REST APIs, admin panels and business systems. Strong experience with PHP, Laravel, MySQL, JavaScript, React, API integrations, queue jobs, schedulers, Firebase notifications, QR/barcode systems and large-scale data processing. Also experienced in independently building and deploying modern web products, utility platforms and mobile applications.

PROFESSIONAL EXPERIENCE

Senior PHP/Laravel Developer — Kian Technology (03/2023 – 07/2026)

- Developed scalable APIs and enterprise web applications across healthcare, HRMS, AI, field-service, e-commerce, inventory and asset-management domains.
- Built and maintained modules for appointments, doctors, patients, billing, pharmacy, inventory, employee management, assets, reporting and automation.
- Implemented REST APIs, queue jobs/workers, schedulers, Firebase push notifications, QR/barcode workflows and third-party API integrations.
- Optimized large-scale import/export workflows processing 80,000+ records and supported enterprise reporting/data operations.

SELECTED PROFESSIONAL PROJECTS

First Medix — Healthcare Management System

Lead Backend Developer

Comprehensive healthcare information management platform for patient records, appointments, billing and clinical workflows. • Multi-role access for doctors, staff and administrators with dedicated operational workflows.

- Patient data and healthcare records designed to handle 80,000+ records at scale.
- Modules covering appointments, doctors, patients, invoices, pharmacy, settlements, inventory and bulk data operations. • Laravel/PHP/MySQL REST API architecture with admin, doctor and supplier-facing capabilities.

Employee Management System (EMS/HRMS)

Full Stack Developer

End-to-end HRMS platform covering the employee lifecycle, attendance, leave, payroll and workforce operations. • Employee profiles, attendance, leave, assets, ID cards and departmental dashboards.

- QR-based attendance workflows with location/geo-fencing support.
- Automated payroll calculations including tax and deduction workflows.
- Firebase notifications, reporting and operational automation for HR teams.

Study Genius AI — AI Education Platform

Backend Architect

AI-powered learning platform for personalized study plans, study materials, summaries and assessments. • LLM/OpenAI integration for generating educational content and learning resources.

- Adaptive quizzes and spaced-repetition style learning workflows.
- Real-time progress analytics and reporting for learners.
- Laravel backend, REST APIs and Firebase-supported platform services.

Wrkman — On-demand Home / Field Services

API Developer

Field-service management platform connecting businesses with skilled workers and supporting job dispatch and service operations. • Migrated core PHP components to Laravel and developed REST API services.

- Real-time worker/job tracking using Firebase-supported workflows.
- Automated quote-to-invoice process for service jobs.
- Push notifications implemented through queued background jobs.

Parq — Smart Parking Platform

Backend Developer

Smart parking management platform for slot booking, real-time availability and digital parking operations. • Real-time parking-slot availability and booking workflows.

- QR-based entry/exit flows with digital payment integration.
- Operator dashboard with revenue and operational analytics.
- Laravel, REST API, MySQL and QR-based workflows.

Health & Fitness Mobile App

Backend Developer

Fitness tracking platform for workout planning, nutrition logging, progress tracking and trainer-client management. • AI-generated workout and meal-plan workflows.

- Firebase real-time chat between trainers and clients.
- Progress graphs, streak tracking and activity history.
- Laravel REST APIs supporting mobile application features.

Dream App Games

Backend / Platform Developer

Multi-game platform backend supporting game operations, leaderboards, social features and synchronized game state. • Real-time leaderboards using Firebase-supported services.

- In-app purchase and virtual-currency workflows.
- Game-state synchronization and anti-cheat validation logic.

• Laravel/PHP REST API backend for mobile gaming features.

EmbroHub — B2B Embroidery Marketplace

Full Stack Developer

B2B marketplace connecting designers, manufacturers and retailers with order and production workflows. • Multi-vendor order management and business workflows.

- Digitization request and file-delivery process.
- Bulk pricing and quotation engine.
- Laravel, MySQL, REST APIs and admin-panel modules.

Viraal Call — VoIP / Communication Platform

API & Backend Developer

Communication platform with VoIP/video calling, virtual number workflows, referrals and call analytics. • VoIP integration with real-time call management.

- Referral rewards and credit-system workflows.
- Call logs, analytics and reporting dashboard.
- Laravel REST APIs, Firebase-supported services and backend integrations.

PlayZone Fun — Entertainment Platform

Backend Developer

Online entertainment hub combining games, streaming content and community features with a freemium/subscription model. • Subscription billing and plan-management workflows.

- Content delivery and platform optimization.
- Social feed with moderation workflow.
- Laravel/PHP, REST API and MySQL backend modules.

Asset & QR Management Platform

Backend Developer

Asset-management solution for employee-linked assets, QR profiles and tracking operations.

- Employee QR profiles and QR/barcode-based asset identification.
- Asset assignment, tracking and management workflows.
- Admin reporting and operational modules for asset visibility.

Healthcare Information Management System (HIMS)

Backend Developer

Healthcare platform covering patient management, billing, pharmacy and doctor operations.

- Patient management, billing and invoice workflows.
- Pharmacy inventory and doctor management modules.
- High-volume Excel import/export using structured data-processing workflows.
- Designed for large healthcare datasets and operational reporting.

INDEPENDENT / PERSONAL PROJECTS

KLYVRO — AI Restaurant Marketing SaaS

AI-powered SaaS product for restaurants to generate marketing campaigns, create channel-specific content, manage campaigns and monitor usage.

- AI-assisted restaurant campaign and marketing-content generation workflows.
- Subscription plans, billing/usage quotas and analytics-oriented product flows.
- Secure authentication with a controlled, read-only admin monitoring approach.
- React, Node.js, REST APIs, MongoDB, AI integrations and Razorpay.
- Live: https://klyvro.netlify.app/

CyberArcade Hub — Browser Gaming Platform

A deployed browser-based gaming hub focused on instant HTML5-style online play without downloads. • Organized game discovery through categories and a gaming-focused web experience.

- Responsive/mobile-friendly interface for playing games directly in the browser.
- Gaming content/blog area to support discovery and engagement.
- Designed as a lightweight web platform for quick access to browser games.
- Live: https://cyberarcade-hub.netlify.app/

CyberArcade Mobile — Android Gaming App

Mobile gaming application created as part of the CyberArcade ecosystem.

- Developed and published an Android mobile application connected to the CyberArcade project ecosystem. • Focused on providing a mobile-first gaming experience alongside the browser platform.
- Google Play: https://play.google.com/store/apps/details?id=com.cyberarcade.mobile

NovaTools — Free Multi-Tool Web Platform

Client-side/serverless utility platform containing practical calculators, conversion tools, image-processing utilities and developer/document tools.

- Calculators for age, EMI/loan, percentage, currency/crypto conversion, DCA simulation, discount/tax and unit conversion. • Image utilities including sprite-sheet slicing, AI background removal, image resizing, color palette extraction, EXIF viewing and SVG-to-PNG conversion.
- Developer/document utilities including PDF building, JSON formatting, Markdown editing, QR generation and text/word-count utilities.
- Local browser processing is used for many tools; image and sensitive inputs can be processed without uploading them to a central application server.
- Live: https://novatools-free.netlify.app/

TECHNICAL SKILLS

Languages & Frameworks: PHP, Laravel, JavaScript, React, HTML, CSS, jQuery

Database: MySQL, MongoDB

Backend: REST APIs, API Integration, Admin Panel Development, Queue Jobs, Cron Jobs, Schedulers, Background Jobs Libraries / Services: PhpSpreadsheet, Firebase Cloud Messaging (FCM), QR/Barcode systems, AI/API integrations Tools: Git, AJAX

Domains: HRMS, HIMS, Healthcare, Inventory, E-commerce, Asset Management, SaaS, AI Platforms, Gaming, Field Service

EDUCATION

SSC — Sir C.J.N.Z Madresa High, Navsari (2015)

PHP & Laravel Training — IIHT Classes, Navsari (2022)
